

Employee Attrition Prediction Report

This report presents the analysis, model evaluation, and insights for predicting employee attrition using a Logistic Regression model.

Model Evaluation Metrics

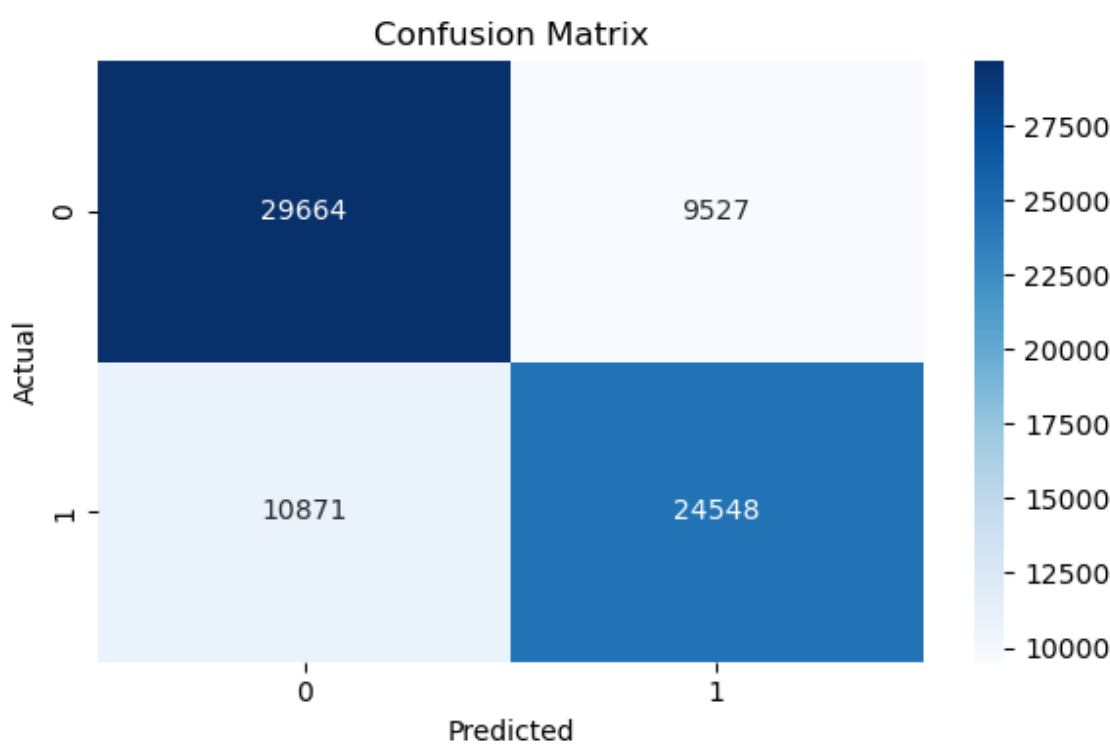

Accuracy: 72.66%

Sensitivity (Recall): 0.693

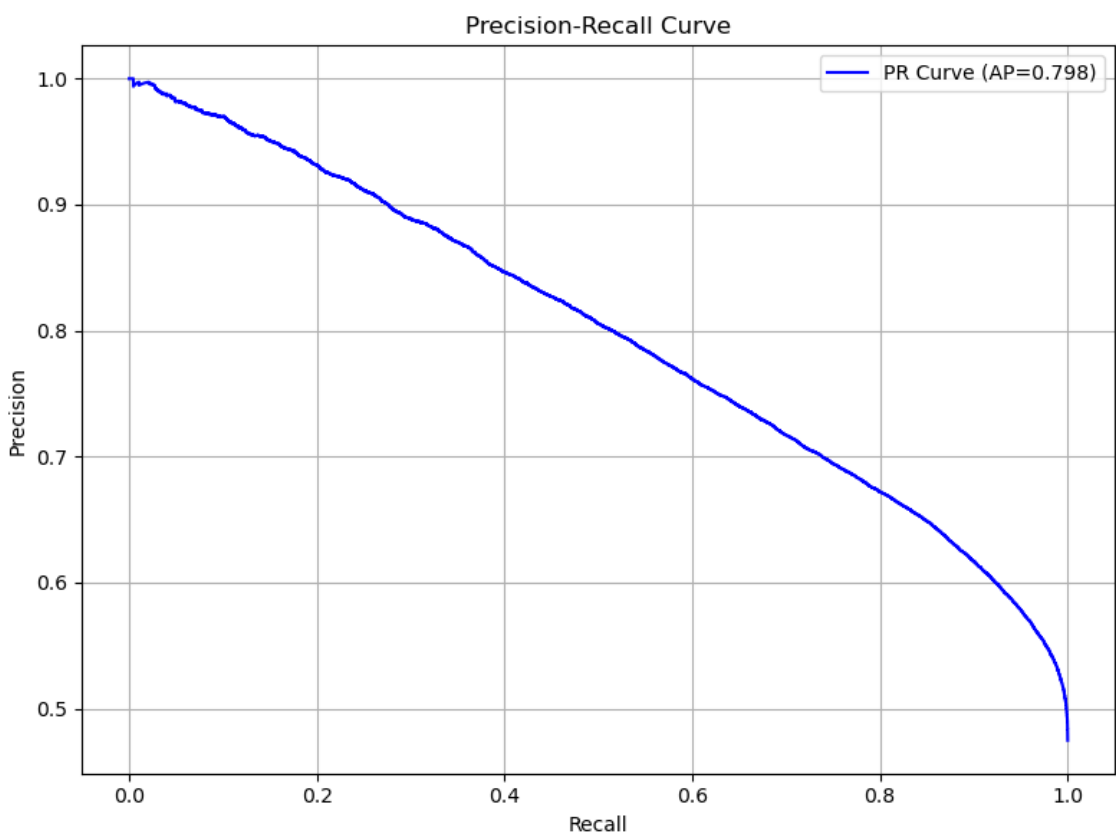

Specificity: 0.757

Precision: 0.720

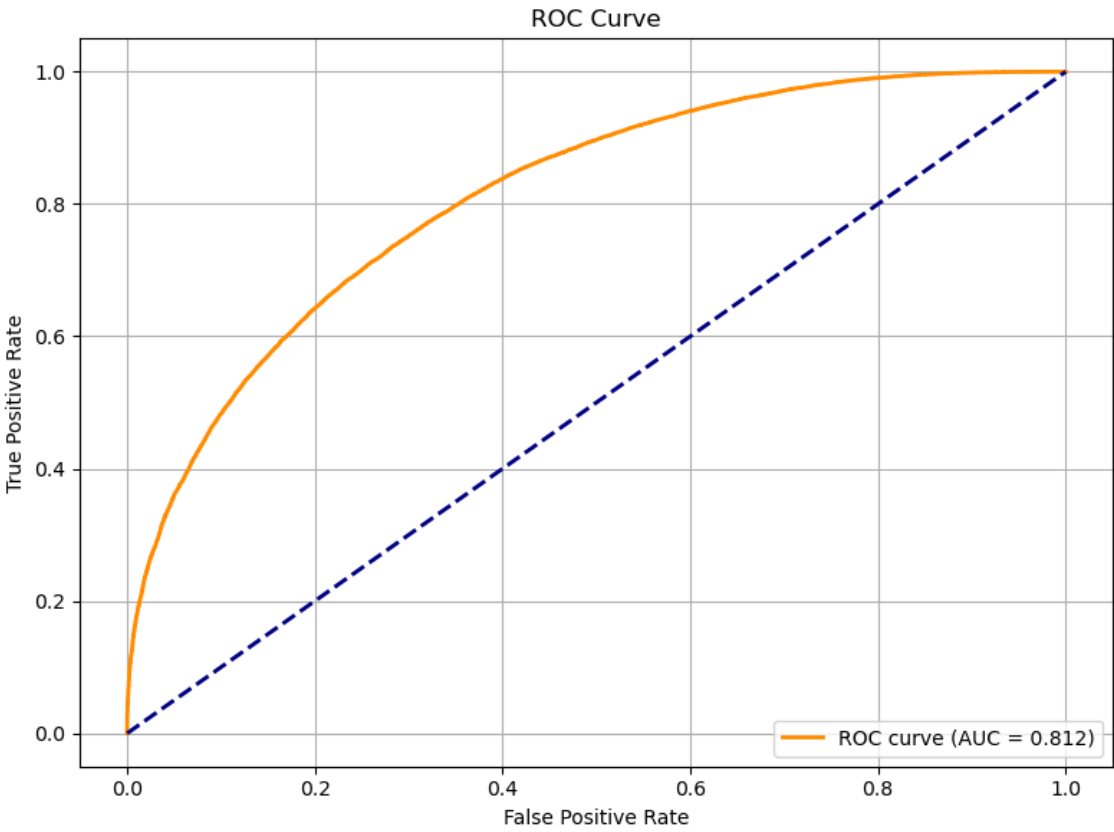

Confusion Matrix

Precision-Recall Curve

ROC Curve

Conclusion

The Logistic Regression model demonstrated good predictive capability for employee attrition. Key metrics such as accuracy, sensitivity, specificity, and precision were calculated. Further improvements could involve feature engineering, tuning probability cutoffs, or exploring more advanced models.
